

Improve productivity and safety through unique machine enhancements provided by Summit Platforms.

Safety

Electronic secondary guarding device on all boom type MEWPs.

Secondary guarding and lift enable function for scissor lifts and vertical mast lifts.

Harness ON™ is an intelligent anchor point that stops the MEWP's operation until the operator attaches their harness carabiner.

Access Control

Control who is using your hired equipment...

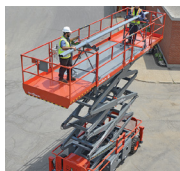

Our GPS Tracking Keypad is a simple and effective system for the management of machine usage, preventing unauthorised use and increasing productivity and safety.

Includes an IPAF PAL Card swipe recognition system.

Productivity

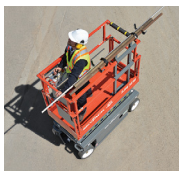

Material Handling Attachments

Large deck diesel scissor lifts – designed to safely and securely carry materials such as cladding panels and large pipes to height.

Medium and compact diesel scissor lifts – ideal for heating, ventilation, sprinkler and air conditioning material installation at height.

Small, medium and large electric scissor lifts – designed to safely and securely carry material to height on a full range of electric scissor lifts.

Boom type MEWPs – designed to safely and securely carry materials such as pipes and conduit to height without sacrificing platform work space.

Power to Platform

All diesel booms and all diesel scissors over 40ft are available with power to platform via an on-board generator. Removes the need to hire a separate generator and have cables trailing from the work area to the ground.
